

Slyzkoukhyi Maksym

Junior Full-Stack JavaScript Developer

Summary

Junior JavaScript Full-Stack Developer with practical experience gained through a commercial internship and personal projects. During my internship, I worked with Express.js, backend data modeling, object relationships, and technical documentation while learning to replicate the business logic of existing 1C/BAS solutions. I have hands-on experience with Node.js, Express.js, SQL, and REST APIs, alongside foundational experience with React and continue to expand my backend development skills. Eager to contribute to a collaborative team and grow as a backend developer by building reliable and maintainable software solutions.

Experience

Junior JavaScript Backend Developer (Intern)

May 2026 - Jul 2026
Vinnytsia, UA, Ukraine

Axioma Audit

- Developed a JavaScript-based configuration designed to replicate the functionality and business logic of an existing 1C/BAS solution.
- Designed and implemented backend object relationships and data models for an existing BAS configuration.
- Created and maintained technical documentation describing object structures, relationships, and system architecture.
- Completed a full-stack development internship and training program, gaining practical experience with modern web development technologies.
- Worked with Docker to set up and manage development environments and application containers.
- Interacted with relational databases, including designing, modifying, and querying data structures to support backend functionality.

Education

Computer Science - Bachelor of Science (BS)
[Vinnytsia National Technical University](#)

2024 - 2028
Vinnytsia, Ukraine

Accomplishments

- Completed an internship in a real commercial project environment, gaining hands-on experience with backend development technologies and software development processes.
- Developed skills in data modeling, system analysis, and technical documentation while working with enterprise solutions.
- Authored 5 scientific conference theses at VNTU, presenting research results and improving analytical skills.
- Created a website "Idea-lab 2.0" for the Youth Council project using HTML, CSS, JavaScript.
- Developed a full-stack course project "Productivity Tracker" for task and productivity management using Node.js, Express.js, MongoDB, and REST APIs.

Certifications

Full-Stack Development Training (Internship Program)

Practical training focused on JavaScript, backend development, databases, React and modern web technologies.

[Beginner] Automated Testing in JavaScript

EPAM — foundational course covering the basics of automated testing, writing test scripts, and QA concepts in the JavaScript ecosystem.
